NARRATIVE REPORT

☐ INTERIM

☒ FINAL

25X1 1. As mentioned in earlier reports, [] fabricated the eyepieces and delivered them to the Government. The eyepieces were not acceptable for two reasons. First, the image viewed through the microscope was rotated by the eyepieces. This was a basic design error and should have been anticipated [] Second, the angle of tilt (15°) as specified by the Government was proven to be only advantageous under certain circumstances. This was an error of the Government's which was discovered in the evaluation. Because of [] design error, the eyepieces were not accepted and [] performance was rated as below average. 25X1 25X1

25X1 2. After the initial rejection, [] worked closely with the Government to determine the most advantageous tilt angle for the eyepieces. When a better tilt angle was determined, [] was to correct both of the design problems and fabricate a new pair of prototypes for a new price. Unfortunately, after research by both [] and the Government, it was determined that a variable tilt angle eyepiece would be the only satisfactory solution but the production cost for this (approximately []) was considered prohibitive. 25X1 25X1 25X1

25X1 3. Because the errors in the design of the prototype tilted eyepieces were attributable to both [] design and the Government's specifications, and because there would be no practical benefit in pursuing this project, it is recommended that the contract be terminated. Since the contract is a fixed price contract and considering the circumstances, a negotiated settlement is recommended.
